

SolarSmart - Powering a greener future

Because future generations depend on the work we do today

[LEARN MORE >](#)

"It's not just about powering homes; it's about protecting our planet for generations to come."

- Ola Olson (CEO of SolarSmart)

A cleaner tomorrow

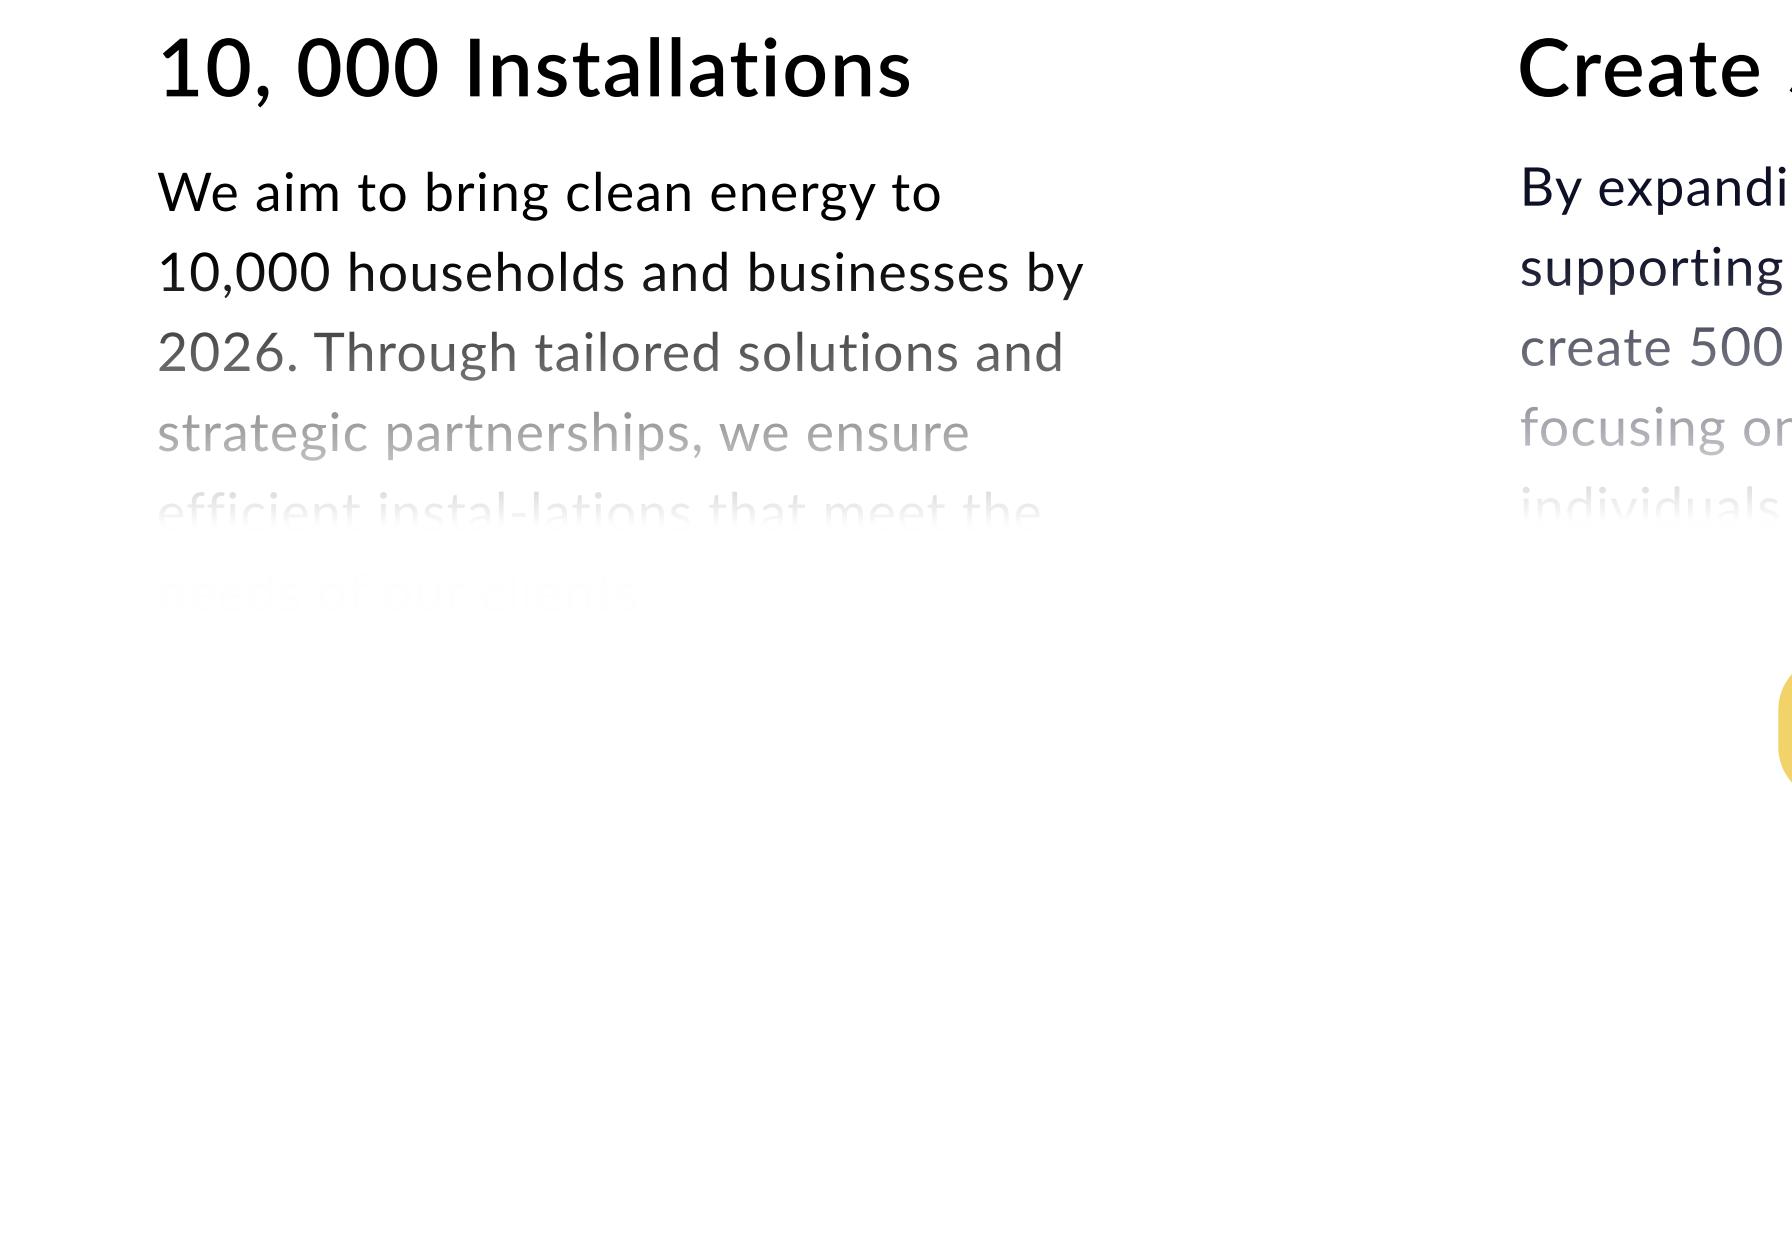

Its endlessly replenished by the Earth itself

Renewable energy is the lifeblood of a cleaner future, it emits little to no greenhouse gases, making it a powerful ally in the fight against climate change.

[LEARN MORE >](#)

We empower individuals with clean energy solutions, support communities through sustainable innovation, and pave the way for a greener future for generations to come.

FREEDOM

The solar panels can go on rooftops, fields, or even water, offering energy independence and financial relief to individuals and communities.

POWER ANYWHERE

Solar energy does not rely on conditions like strong winds or flowing rivers. The sun shines everywhere, making solar energy a universal and transformative solution.

How Solar Energy Works

Transforming sunlight into energy

Photovoltaic effect is the main principle behind solar energy. Solar cells absorb sunlight, and it is the bases of solar panels. In the photovoltaic effect direct current (DC) power is produced by solar cells using sunlight. Invertor devices transform DC electricity into alternating current (AC) electricity, that your home can use. This benefits for lowering cost of electric bills.

Our Story

Empower communities while protecting the planet

At SolarSmart, we are committed to provide innovative, eco-friendly energy solutions that empower individuals, businesses, and communities. We use the power of solar energy, and aiming to reduce carbon emissions, create cleaner and greener tomorrows, and build the base for the brighter, sustainable future. Our story started in 2000 and we have been building solar energy since then.
